ENERGY UTILIZATION

POLICY ON ENVIRONMENT AND ENERGY UTILISATION

The environment and energy use have emerged as major concerns for people, businesses, and governments alike in today's world of rapid change. The pressure on our natural resources and energy sources has increased significantly as a result of the growing global population, industrialization, and urbanization. In order to ensure a sustainable and successful future, it is essential to take on these challenges and implement policies that support environmental protection and effective energy use. In order to reduce its negative effects on the environment, Sri Venkateswara College of Engineering and Technology is committed to managing energy in a systemic manner. Through the promotion of environmental values among teachers and students, the Green Campus concept enables the institution to take the lead in the regeneration of environmental culture. The environment and energy use policy will assist us in integrating environmental awareness and efficiency into our daily actions, assisting us in realizing our commitment to protecting natural resources and limiting their consumption.

OBJECTIVES: -

- ❖ To persuade the students to keep their surroundings clean and green.
- ❖ Encouraging the students to adopt eco-friendly behaviours that reduce their consumption of water and electricity.
- ❖ Offer chances for sustainability training and learning opportunities.
- ❖ As much as possible, switch to LED or compact fluorescent bulbs.
- ❖ Turn off extra lighting and take advantage of natural sunlight.
- ❖ To organize a drive for tree planting
- ❖ Creating awareness among the public by educating students
- ❖ Providing opportunities for staff and students to participate in actions that advance environmental protection.
- ❖ To start a tree-planting campaign in an effort to reduce energy use continuously.

This institution's staff and students are all subject to the terms of this environmental and energy policy.

PROMOTION OF "SAVE ENERGY TIPS" IN AND OUTSIDE THE INSTITUTE:

It is a commendable effort to promote the energy conversation.

- Making educational posters that highlight advice for saving energy and its advantages.
- Shut off unnecessary lights and replace them with ambient light.
- Refrain from utilizing decorative lighting.
- Continually assess how energy-saving actions are having an effect.

RENEWABLE ENERGY:

The regulatory framework, financial incentives, research and development support and public awareness campaigns were frequently used in renewal energy programs. In order to accelerate the transition to a low-carbon and sustainable energy system that benefits both the environment and society as a whole, these policies are implemented at a variety of levels, including national, regional, and local.

WASTE MANAGEMENT:

Energy efficiency and environmental sustainability are directly impacted by waste management. When tackling garbage, the institute constantly adheres to the "3R" (Reduce, Recycle, and Reuse) principle.

Some of the initiatives are: -

- Making use of several trash can types, such as those for recyclable, dry, wet and non-recyclable waste.
- Prompted to use digital content instead of paper-based content.
